# SAMSUNG AGM: 3<sup>R</sup>D NOVEMBER 2022

---

## **As raised at the meeting**

I am asking this question on behalf of Railpen, the investment arm of the UK railways pension schemes. As investors, we recognise the threats from climate change to our portfolio companies and its subsequent potential for impact on the financial outcomes for our beneficiaries and their futures.

Railpen has committed to reach Net Zero by 2050 or sooner and engages on climate-related issues with portfolio companies which are key emissions contributors.

Given the critical role Samsung plays in the materials ecosystem, we welcome your commitment to climate action and Net Zero. However, investors need clear and specific guidance on Samsung's decarbonisation and capital allocation strategy with respect to your products, worksites and suppliers, resource efficiency.

We have requested calls and meetings with the company before and have had no response, Will the Chair of the Board, or relevant Board Director, agree to meet with Railpen to discuss these important issues further?

## **As emailed to Samsung in advance**
